

**CS 428**

**CREATING REQUIREMENTS**

Fall 2021

Bruce F. Webster

# THE HARD TRUTH OF REQUIREMENTS

IN CS, IT CAN BE HARD TO EXPLAIN  
THE DIFFERENCE BETWEEN THE EASY  
AND THE VIRTUALLY IMPOSSIBLE.

- Organize in terms of explicit features that define what you want to present both for the initial demo (November 15th) and then for the final demo (December 6th)
- Focus on output, user interface, results – that will define both internal processing and necessary input.
- Core goal: your requirements should form the project baseline that defines what you're building
  - Bob Millar at ARINC: “If you don't know what you're building, how will you know when you're done?”
- It is as important to define what you are *not* building as what you *are* building (cf. Pages spreadsheet)
- Watch Dr. Knutson's podcast on software requirements [[here](#)]
- You should be revising this document constantly throughout the semester
- **Look at prior semester wikis for both ideas and actual document formats**

# WHY REQUIREMENTS?

- You're writing them before you (fully) know what you want to build
- You're writing them before you know for sure if you can build it
- The wrong people are often involved writing them
  - Managers who don't know or understand what's technically feasible in the desired time-frame
  - Engineers who are more interested in building something cool rather than what the customer will pay for
  - Marketers who want the impossible
- Customers usually don't know what they really want until they see something working
- General simple requirements explode into large numbers of detailed design and implementation requirements
- Failure to formally manage requirements (change control) leads to massive scope creep
- Strengths & weaknesses of waterfall-ish vs. agile-like approaches
  - Waterfall: risk of 'analysis paralysis'
  - Agile: risk of blind canyon/stuck on a local maximum

# THE MANY CHALLENGES OF REQUIREMENTS

- Due by **midnight on Saturday (10/02)**
  - Your team's **requirements document** via your project wiki page
    - Suggestion: look at projects from prior semesters to see what they did
    - Feel free to use their document format
  - Your team's next **status report (#2)** via your project wiki page
  - Individually, you need to watch and pass off podcast #2
- Reading due **by start of class next TUESDAY (02/16)**
  - *Peopleware*, Part II (**chapters 7-13**)
  - Webster readings #3
  - **Can count up to 2 hours of reading/podcast as billable**
- Topic for next week: project estimation and scheduling

# FOR THE COMING WEEK
